

• AI AGENT GOVERNANCE FOR THE ENTERPRISE

# Every AI agent. Every system it touches. Under your control.

Privify FORGE finds every AI agent in your enterprise, including shadow AI and local models, traces what it touches, and stops it in real time when it crosses a line. Your data stays yours.

Your data never leaves your environment

Sees what gateways never see

Self-hosted or managed by Privify

## THE QUESTIONS ON EVERY CISO'S DESK

### Your board is asking. FORGE gives you the answers.

#### Which AI agents are running in our environment right now?

A live inventory of sanctioned and shadow AI, including local models on developer machines, found on the endpoint rather than self-reported.

#### What are they reaching, and should they be?

A full interaction graph, human to agent to tool, showing exactly what each agent touched, with trace replay for incident review.

#### Can we stop an agent that oversteps?

Yes. Inline policy stops a risky call before it reaches the AI provider, on Windows, macOS and Linux, with human approval for high-risk actions.

#### Can we prove it to regulators and auditors?

Audit evidence out of the box across 13 compliance frameworks, exported to the SIEM your team already runs.

## ONE PLATFORM, THREE DISCIPLINES

### Discover. Observe. Govern.

01

#### Discovery

Find every agent and model, including shadow AI nobody registered.

02

#### Observability

Trace every interaction, human to agent to tool, and replay it.

03

#### Governance

Block risky actions inline, catch sensitive data, and prove it to auditors.

## HOW IT WORKS, IN PLAIN TERMS

**FORGE runs where your agents run, so nothing slips past.**

### AI ON YOUR ENDPOINTS

- Copilots & assistants
- Custom & CLI agents
- Local models
- Browser & shadow AI

### Privify **FORGE**

**Discover** every agent

**Observe** every interaction

**Govern** it inline

On the endpoint, in your environment

### WHAT THEY REACH

AI model providers

Internal tools & APIs

Data platforms

Other agents

**YOU GET** Inventory · Interaction graph · Blocked actions · SIEM-ready evidence

### Sees what gateways can't

Local models, direct API calls and browser AI never pass through a protocol gateway. FORGE catches all three.

### Prevention, not just detection

Policy is evaluated the moment an agent acts, so a blocked call never reaches the provider. That is a preventive control auditors recognize.

### Makes your stack smarter

No agent registry, no cooperation from the tools you govern. Findings flow into the SIEM and controls you already own.

## A TYPICAL 90-DAY PILOT PATH

**From blind spot to board-ready in one quarter.**

**DAY 0**

### SCOUT discovery scan

A free, agentless scan that surfaces shadow AI already running.

**You get:** a shadow AI baseline

**WEEKS 1-2**

### Deploy & discover

FORGE goes live, self-hosted or managed, and builds the agent inventory.

**You get:** a live agent inventory

**WEEKS 3-6**

### Observe & baseline

Every interaction is traced; risky patterns and sensitive data surface.

**You get:** a full interaction graph

**WEEKS 7-12**

### Govern & prove

Policies move from monitoring to inline blocking; evidence flows to audit.

**You get:** enforced policy and an audit pack

## VALUE ACROSS THE LEADERSHIP TEAM

**One platform, four very different wins.**

### CISO

One view of agentic risk, and a defensible answer when the board asks.

### Risk & Compliance

Evidence for AI regulation and model-risk reviews, without manual collection.

### CIO & Platform

Adopt new agents and frameworks without a bespoke security review each time.

### Internal Audit

A continuous record of what agents accessed and which policies applied.

## DATA SOVEREIGNTY

### Your data never leaves. That's the design, not a setting.

#### Nothing reaches Privify

In a self-hosted deployment, agent activity, traces and DLP findings stay with you. None of it ever reaches Privify.

#### Runs inside your perimeter

The management plane, database and event store are yours. Discovery probes report to your management plane, not to us.

#### Anonymized signals only

What informs the product is limited to anonymized policy and pattern signals. Never records, prompts or files.

#### Evidence you own

Audit trails stay in your environment and export to 11 SIEM platforms in the formats your SOC already uses.

## DEPLOYMENT

### Self-hosted in your network, or iron clad hosting by Privify.

#### Endpoint agent

Inline blocking on Windows, macOS and Linux.

#### Browser extension

Governs AI used in the browser, where most risk starts.

#### CLI proxy

Covers command-line AI tools used by developers.

#### Host probes

Discovery of shadow AI and local models on every host.

## REGULATORY ALIGNMENT

### 13 compliance frameworks, audit evidence out of the box.

| FRAMEWORK              | WHAT IT EXPECTS                                | HOW FORGE HELPS                                                      |
|------------------------|------------------------------------------------|----------------------------------------------------------------------|
| EU AI Act              | Oversight, logging and monitoring of AI in use | Inventory of AI in use, full trace logs, human-in-the-loop approvals |
| GDPR                   | Lawful, minimal processing of personal data    | Real-time DLP stops personal data leaving through AI calls           |
| HIPAA                  | Safeguards for protected health information    | PHI detected and blocked before it reaches an AI provider            |
| NIST AI RMF, ISO 42001 | Govern, map, measure and manage AI risk        | Continuous discovery, monitoring and evidence for AI controls        |
| RBI FREE-AI, DPDP Act  | Responsible AI; lawful personal-data handling  | Governance evidence while data stays in your environment             |
| SOC 2, ISO 27001       | Access control and monitoring of systems       | Extends control evidence to AI agents; exports to your SIEM          |

FORGE supports your compliance program with evidence and controls; it does not by itself make an organization compliant.

WHERE FORGE FITS

The agents your gateway will never see.

| CAPABILITY                                          | FORGE | MCP<br>GATEWAYS | DLP / CASB | APM /<br>TRACING |
|-----------------------------------------------------|-------|-----------------|------------|------------------|
| Sees local models, direct API calls and browser AI  | ●     | ○               | ●          | ●                |
| Maps human → agent → tool interactions              | ●     | ●               | ○          | ●                |
| Blocks risky actions before they reach the provider | ●     | ●               | ●          | ○                |
| Audit evidence built for AI agents                  | ●     | ●               | ●          | ○                |

● Core strength   ● Partial   ○ Not a focus   Typical by category; individual products vary.

BUILT FOR REGULATED INDUSTRIES

Where FORGE earns its keep

Banking & financial services

Govern agents that touch core banking, payments and customer data, with evidence for model-risk reviews.

Insurance

Oversee agents in claims, underwriting and servicing as they reach policyholder systems.

Healthcare & life sciences

Catch PHI before it reaches an AI provider, and keep clinical agents in bounds.

Consulting & professional services

See which agents reach which systems across the firm’s tools and platforms.

SPECIFICATIONS

At a glance

|             |                                       |
|-------------|---------------------------------------|
| Coverage    | Endpoints, local models, browser AI   |
| Discovery   | 4 host probes + OpenTelemetry traces  |
| Enforcement | Inline blocking; human approvals      |
| Detection   | 12 DLP patterns, 10 threat signatures |
| Platforms   | Windows, macOS, Linux                 |
| SIEM export | 11 platforms · CEF, LEEF, STIX, ECS   |
| Compliance  | 13 frameworks incl. HIPAA, GDPR       |
| Deployment  | Self-hosted or managed by Privify     |
| Assurance   | Aligned with SOC 2 (not certified)    |

NEXT STEP

Start with a free , No obligation SCOUT discovery scan.

[www.privify.io](https://www.privify.io)  
sales@privify.io · +1-800-213-1324

1 · SCOUT SCAN

Agentless scan for shadow AI. Most teams are surprised.

2 · 90-DAY PILOT

FORGE live on your infrastructure, against your criteria.

3 · ENTERPRISE ROLLOUT

Scale across business units with policies already proven.
